878.4	1515	931.4	1610	984.4	1705	1037.4	1800

Example Only

PROCEDURE:

- 1: Wash and dry bottle
- 2: Fill bottle with slip to the top lip
- 3: Weigh bottle with slip on scales
- 4: Check total weight on chart above and read off litre weight

IMPORTANT:

To check accuracy of your scales please first weigh the empty container then weigh the container full of water right up to the lip and compare these weights with the weights shown above. If this is not so please check your scales - cleanliness, charge of battery etc. If still weighing inaccurately please check the weights on another set of scales.
